## INTRODUCTION

### Introduction

The issue that we our team is researching is aids and its consequences around the world. AIDS stands for **Acquired Immune Deficiency Syndrome** and is a “collection of symptoms and infections in humans resulting from the specific damage to the immune system caused by the human immunodeficiency virus (HIV)” ([www.Wikipedia.org](http://www.Wikipedia.org)). AIDS has affected an estimated 38.6 million people worldwide and continues to grow daily. As global citizens it is important to understand AIDS and its effects around the world. Although AIDS may not directly affect everyone, global awareness of AIDS is the first step to take action against it and combat it worldwide.

### welcome

this is an adventure . . .

check out the site. eventually, there will be some pretty cool things goin' on here. i hope.

some projects (like the literacy video) get their own pages off to the left of this section. others can be found using the tabs at the top of the page.

i've been writing for fun for years, and i really enjoy it. video has also been an interest of mine for a long time, and i'm a cinema studies minor so i really enjoy movies in general. this should be a great class - i'm a political science major, so i rarely get the chance to let my creative side run wild in the classroom. i'm glad i get to, at least for a semester.

enjoy!

I was sent this link by e-mail and thought it was both interesting and informative. It tests whether you have more of a "dixie" or "yankee" dialect. Though these dialects aren't comprehensive of all of the United States, the site still teaches you about some common words that are pronounced differently.
